# Lab 5- System test planning

In this lab, you will be constructing and evaluating parts of a system test plan for a planned system (some of) whose user stories are shown below. This system is intended to be a competitor for Desire2Learn.

# Lab 5 – User Stories

- As a student, I want to hand in assignments.
- As an instructor, I want to control hand in deadlines for assignments.
- As a student, I want to be able to modify what I have handed in if it is before the deadline.
- As a teaching assistant, I want to access my students' assignments.
- As an instructor, I want to suspend or alter a hand in deadline for a specific student, so leeway can be permitted in special circumstances.
- As a student, I want to be able to modify what I have handed in after the deadline, if I am warned what the penalty will be.
- As an instructor, I want to determine which of my students has/has not handed in an assignment.
- As a teaching assistant, I want to know which of my students has/has not handed in an assignment.
- As a teaching assistant, I want to share student assignments with the other TAs in the course so that we can discuss unusual cases.
- As a teaching assistant, I want the grading of assignments to be automatic so that I have less work to do.
